Disclaimer: Use of the Reimbursement Hotline does not guarantee insurance coverage or payment. Coverage is based upon patient eligibility, specific plan benefits, medical necessity, individual contracts and local coverage policies.

### About Geistlich Derma-Gide®

Geistlich Derma-Gide® is an advanced bilayer scaffold derived from porcine extracellular matrix designed specifically to support wound healing. Geistlich Derma-Gide®'s bi-layered design mimics the structural organization of human skin facilitating re-epithelialization and cell ingrowth. The bi-layered structure is a result of the refinement process and the two layers are mechanically linked to each other to provide optimal stability.
